

Introduction to Supporting Physics Teaching for Technicians

Email: science@cleapss.org.uk

Tel: 01895 251496

This one-day practical course is designed for science technicians who have little physics knowledge and are inexperienced with the physics equipment used in science departments.

The objective of the course is to enable technicians to gain some of the basic skills required to support physics teaching so that they can carry out their jobs with greater confidence. They will have the opportunity to set up circuits, use a multimeter, solder, consider some common hazards in physics, identify, set up and use a variety of physics equipment.

During the day the following will be covered:

- Working with electricity. Relationship between voltage, current and resistance. Changing fuses. Using circuit diagrams to set up circuits. Using a multimeter to check fuses, batteries, connecting leads and to find faults in circuits.
- Soldering equipment. Different soldering techniques to join electrical contacts. Making connecting leads and soldering components onto circuit board.
- Recognising some common hazards in physics.
- Identifying apparatus and how it can be used.
- Setting up and using a variety of physics equipment such as a ripple tank, ray boxes, signal generator, vibration generator, and low voltage power supply.

To get the most out of the course, participants need to bring a multimeter with a resistance range.

Title: Introduction to Supporting Physics teaching for technicians

For: Technicians
