

Fume Cupboard Testing

Email: science@cleapss.org.uk

Tel: 01895 251496

It is the responsibility of employers who provide fume cupboards to ensure that they are tested at 14 -monthly intervals (COSHH Regulations). If laboratory technicians, teacher or advisers are required to carry out the test and report to their employer, then they should be suitably trained. The object of this short course is to provide this tuition.

Topics covered include:

In the first part of the course, instructions on how to carry out a face-velocity test and a visual examination are given. This lasts for about 75 minutes. Participants may depart after this session but, if schools have, or intend to buy, a mobile filter fume cupboard, then it would be advisable to stay on for the second part.

The second part of this course demonstrates a method for testing the saturation of filters in filter fume cupboards. The talk also reviews the advantages and disadvantages of these types of fume cupboards and explains how they work. This session lasts about 45 minutes. For both parts of the course, written instructions will be provided by CLEAPSS.

Title: Fume Cupboard Testing

For: Technicians

For details of the next scheduled course please see our website <http://courses.cleapss.org.uk/>
