

Supporting Safe Practical Microbiology - Classic

Email: science@cleapss.org.uk

Tel: 01895 251496

Why come on this course?

Do you lack confidence/experience in providing for school microbiology? This intensive course covers all the essentials of H&S and aseptic technique that are necessary for safe and effective KS3, GCSE and A level microbiology practicals.

The course is entirely “hands on” so you will gain confidence as you practice the skills during the day. At the end of the course you can take away the cultures and plates you have made, to watch them develop.

What we will do on the course?

- H&S aspects to comply with the COSHH regulations.
- Skills required for provision of safe equipment and materials.
- Safety aspects when culturing unknown environmental microbes.
- Safe sub-culturing of microbes for student use in lessons.
- Dealing with spillages and contaminated materials.
- Ideas for safe and successful practical activities.
- Disposal.

Today I did my first microbiology lesson after going on the [CLEAPSS course](#). I have to say, without that course I was utterly clueless about all of the techniques from proper preparation of everything to aseptic techniques and disposal. Today I felt totally confident in what I was doing when I was assisting with the practical and thoroughly enjoyed it and that means a lot coming from a chemist 😄

I would definitely say if you do any microbio work that you go on the [course](#)

For: Teachers & Technicians

Duration: 1 Day

Times: 9am to 4pm (approx.)

For details of the next scheduled course please see our website.
