

Safety Examination of Autoclaves, Pressure cookers & Model steam engines

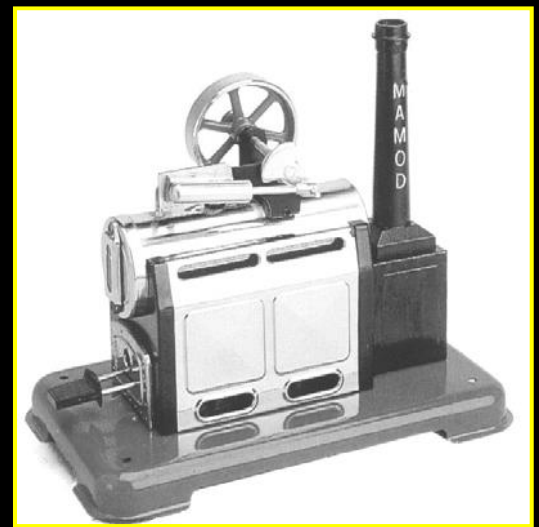

Email: science@cleapss.org.uk

Tel: 01895 251496

What this course is about

This course is aimed at the person in a school who has been asked to carry out the examination of pressure vessels to ensure they are safe to use under the Pressure Systems Safety Regulations (2000). In particular, we will be considering the role of CLEAPSS in meeting the requirements specified by the HSE in the 2014 ACOP.

PLEASE NOTE this course will focus on the equipment that is not thermostatically controlled. If you are in doubt about whether your equipment will be covered please contact CLEAPSS before booking a place.

What this course covers:

- The basics of how the pressure vessels work.
- Safe operation of the range of school autoclaves, pressure cookers and steam engines.
- The legal requirements, including the employer's duty to appoint a competent person for the examination of autoclaves, pressure cookers and model steam engines.
- The meaning of 'competent person' in the context of the CLEAPSS approach to pressure vessel examination.
- Reviewing the written schemes of examination included in CLEAPSS document L214.
- The management of the statutory safety examination in the school context
- Participants are encouraged to bring along their own autoclave and/or model steam engine. Note: the course itself will not constitute the statutory examination for these items.

Title: Safety Examination of Autoclaves, Pressure cookers & Model steam engines

For: Science technicians or the person who will carry out the examination of pressure vessels
