

# Health & Safety Management for Heads of Science

Email: [science@cleapss.org.uk](mailto:science@cleapss.org.uk)

Tel: 01895 251496

The main emphasis of this one-day course is on management health & safety issues and risk assessment. It is intended for Heads of Science, their deputies, heads of subject and those aspiring to such posts.

### The objectives for the day are:

- Raise awareness of current and significant safety issues in science teaching.
- Develop a better understanding of what is required by health and safety legislation.
- Consider the implications of this for the management of safety in science departments.
- Consider the risk assessment process, as required by the Management regs, COSHH regs and others
- Understand the uses of a safety policy and how it can be monitored

The day is a mixture of input from the trainer, discussions and a variety of activities intended to enhance participants' understanding of the legislative framework and how it applies in schools, especially risk assessment.

Common and not so common, but more serious, accidents which occur in school science will be examined along with a discussion of the implications for management. There will be plenty of opportunities for participants to identify their own areas of concern.

Legal requirements for risk assessment both in the curriculum and in the prep room will be considered.

### Outcomes

By the end of the day participants:

- Will have explored in detail what health & safety legislation requires and what it does not
- Will have considered what constitutes a sensible, manageable and effective approach to risk assessment
- Will appreciate the need for a health and safety policy.
- Will have considered how its implementation can be sensibly monitored.

Duration: 1 Day

Times: Start 9am; Finish 4pm (approx.)
